

Exercise 12.2: Multiple Configuration Files

The Setup:

In this (short) exercise, we will once again extend the bank application, this time to split the single springconfig.xml file into multiple configuration files.

Copy the **exercise-12-1** project to **exercise-12-2** and remember to update the pom.xml file for the new project.

The Exercise:

Split springconfig.xml into the following 3 files:

- springserviceconfig.xml
- springdaoconfig.xml
- springjmsconfig.xml

Where each files contains the spring configuration related to its area – the springdaoconfig.xml and springjmsconfig.xml files should be quite short.
